Allowable Subject Matter

1. Claims 1-16 are allowed.

With respect to claim 1, the following is an examiner's statement of reasons for allowance: the prior art of record neither discloses nor makes obvious the combination set forth in the independent claims, and especially does not show "*at least one injection tube for supplying an amount of said compressor discharge air into said combustor body, said injection tube is disposed between said aperture and through said casing; and a collar disposed at said passageway, wherein said collar surrounds said injection tube so that said injection tube passes through said collar and a gap is disposed between said collar and said injection tube, said collar having a plurality of openings*", in combination with the other claim limitations.

With respect to claim 14, the following is an examiner's statement of reasons for allowance: the prior art of record neither discloses nor makes obvious the combination set forth in the independent claims, and especially does not show "*at least one injection tube for supplying a variable amount of said compressor discharge air into said combustor body, said injection tube is disposed between said aperture and through said casing; and means for supplying said fixed amount of said compressor discharge air into said body, said means for supplying said fixed amount of said compressor discharge air disposed circumferentially around said at least one injection tube for supplying a variable amount of said compressor discharge air*", in combination with the other claim limitations.

With respect to claim 15, the following is an examiner's statement of reasons for allowance: the prior art of record neither discloses nor makes obvious the combination set forth in the independent claims, and especially does not show "*at least one injection tube for supplying*

a variable amount of said compressor discharge air into said combustor body, said injection tube is disposed between said aperture and through said casing; and a collar disposed at said passageway and mounted to said combustor body and extending to said injection tube, said collar configured to supply a fixed amount of said compressor discharge air to said body”, in combination with the other claim limitations.

With respect to claim 16, applicant arguments presented *on page 5 the last paragraph* of applicant’s response are found persuasive because the prior art of record neither discloses nor makes obvious the combination set forth in the independent claims, and especially does not show *“supplying a fixed amount of said compressor discharge air into said combustor body though said collar and supplying a variable amount of said compressor discharge air into said combustor body through said at least one injection tube, said fixed amount of said compressor discharge air disposed concentrically around said variable amount of said compressor discharge air”* in combination with the other claims limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
